EMAIL + SMS GROWTH PROPOSAL · MARCH 2025

Turning Press Coverage Into a *Repeat Revenue Engine*

BrandFeatured has the product. The opportunity is everything that happens after the first sale — and right now, that's almost entirely untapped. This proposal outlines exactly how we close that gap.

SEE THE STRATEGY

WHAT WE'RE BUILDING

5
KLAVIYO AUTOMATION FLOWS

30–90
DAYS TO FULL DEPLOYMENT

$1,500
STARTING MONTHLY

THE GAP

BrandFeatured sells a *one-time* product to customers who should be buying quarterly.

Every touchpoint on the site is acquisition-only. The current email program is transactional at best — stage updates that read like receipts, no relationship, no retention, no reason to come back.

Meanwhile, the brands that compound their PR coverage — publishing every quarter, timed to seasonal moments — see outsized SEO gains, higher social proof scores, and measurably stronger conversion rates. BrandFeatured should be the one telling that story. Right now, nobody is.

GAP 01

Pipeline emails are receipts, not relationships

Stage updates (Briefing, Writing, Draft, Published) have zero brand voice. The "You're live" moment — the highest-leverage touchpoint BrandFeatured has — is currently a status notification.

GAP 02

No lifecycle after the campaign ends

Nothing fires after Published. No post-purchase nurture. No seasonal re-engagement. No win-back. Buyers who should be on their third campaign have gone silent.

GAP 03

High-intent drop-off with no recovery

PR is a considered purchase. Visitors land on the pricing page, hesitate, and leave. No site abandonment flow. No checkout recovery. These are the warmest leads on the site — and they're walking out quietly.

GAP 04

One message to every vertical

A DTC founder and a restaurant operator have entirely different PR calendars. Right now they get the same email. Vertical segmentation unlocks seasonal relevance that generic sends can never achieve.

THE STRATEGY

Five flows. Every email, mapped out.

Here's exactly what gets built — every flow, every email, every subject line. The popup is the foundation: one industry question on signup that personalizes everything downstream.

CHECKOUT ABANDON | WELCOME + POPUP | WIN-BACK | SITE ABANDON | POST-PURCHASE

TRIGGER: STARTED CHECKOUT (NO PURCHASE) 3 EMAILS · 1 SMS · 72HR WINDOW

"You were close..."

Simple cart reminder. "[Package name] is still available." One trust signal — Trustpilot rating or total brands featured. Single CTA back to checkout. No discount yet — recovers anyone who just got interrupted.

GOAL: RECOVER THE EASY WINS BEFORE APPLYING PRESSURE

EMAIL 2 + SMS

"The 5 questions people ask before their first campaign"

Objection buster. Answers the real hesitations head-on: Is this real editorial? How long does it take? What's the SEO value? Can I review the draft? Can agencies resell? SMS fires alongside: "Still have questions about BrandFeatured? Reply — we'll answer directly."

GOAL: REMOVE EVERY REASON NOT TO BUY

EMAIL 3 — 72 hours after abandon

"Last chance — $15 off your first campaign"

Small incentive, valid 24 hours. "We want your first campaign to be a no-brainer." Modest offer — not a fire sale. After this email, subscriber moves to broadcast list. No further recovery pressure.

GOAL: CLOSE THE FINAL FENCE-SITTERS WITH A LOW-RISK NUDGE

PLATFORM SETUP

Two platforms. One clear owner each.

MailerLite stays active and handles everything tied to the PR campaign pipeline. Klaviyo is introduced alongside it to own acquisition, retention, and re-engagement. The two platforms don't overlap — each has a defined lane.

STAYS IN MAILERLITE

Pipeline Transactional Emails

Order-triggered · Do not migrate · Already working

TRIGGERED AUTOMATICALLY WHEN CAMPAIGN STATUS CHANGES

01 **Draft Stage**
Fires when a new PR package is purchased and brief is received. Confirms order and sets expectations for the writing process.

02 **Writing Stage**
Notifies client that their campaign is actively being written. Builds anticipation and reduces support inquiries.

03 **Review Stage**
Sends draft for client approval. Includes review instructions and response deadline.

04 **Published Stage**
Confirms campaign is live. Delivers placement links and "As Seen On" badge assets. Highest-leverage touchpoint — currently a status notification, future opportunity for retention handoff to Klaviyo.

⚠ These flows are not touched during this engagement. No MailerLite credentials, templates, or automations will be modified.

NEW — BUILT IN KLAVIYO

Acquisition, Retention & Re-engagement

Installed fresh · Full build · 5 flows + popup

TRIGGERED BY SITE BEHAVIOR AND PURCHASE HISTORY

01 **Welcome Series + Popup**
3-step popup captures email, then industry vertical. Drives a 4-email welcome sequence with $25 off incentive and industry-personalized content.

02 **Checkout Abandonment**
3 emails + SMS over 72 hours. Fires when someone starts checkout but doesn't purchase. Always the first flow activated — Week 1 of every plan.

03 **Browse / Site Abandonment**
2 emails + SMS over 48 hours. Fires when a known contact browses the pricing or packages page without starting checkout.

04 **Post-Purchase**
3 emails + SMS over 90 days. Fires after a Klaviyo-tracked purchase. Industry-branched at Day 45 using the vertical tag set during signup.

System Architecture

Two data flows feed Klaviyo in parallel. Behavioral events come from the site via Klaviyo JS. Purchase events come from ThriveCart. MailerLite runs independently and is never touched.

ENTRY POINT

Visits brandfeatured.com

User browses site, views pricing page, or starts checkout. Identity resolved via Klaviyo cookie if previously subscribed.

↓

KLAVIYO JS — SITE TRACKING

Behavioral Events

Custom JS on brandfeatured.com captures: Active on Site · Viewed Item · Started Checkout. Required for browse and checkout abandonment — ThriveCart does not pass these events.

↓

KLAVIYO POPUP

3-Step Signup Form

Step 1: email + $25 offer. Step 2: industry vertical tag. Step 3: SMS opt-in. Triggers Welcome Series. Replaces existing MailerLite popup on site.

↓

THRIVECART — NATIVE INTEGRATION

Purchase Events → Klaviyo

ThriveCart's native Klaviyo integration sends: Placed Order · Ordered Product · Cancelled Order · Refunded Order. Connect via ThriveCart Settings → Integrations → Klaviyo. No custom code required.

↓

STRIPE — NO DIRECT CONNECTION

Payment Processing Only

Stripe connects to ThriveCart only. Do not connect Stripe directly to Klaviyo — all order data already passes through ThriveCart. Direct connection causes duplicate events.

↓

KLAVIYO

Revenue Tracking + Automations

MAILERLITE — UNCHANGED

Pipeline Transactional Emails

6 automations stay untouched: Status = Starting · Form Not Filled (48hr + 7 day) · Status = Writing · Status = DraftSent · Status = Publishing. No unsubscribe link — operational emails only.

CUSTOM EVENT — DEV REQUIRED

"Publishing Complete" → Klaviyo

When Status = Published, a custom event fires to Klaviyo. This triggers the Post-Purchase flow at the right moment rather than on a fixed delay from purchase date.

KLAVIYO

Post-Purchase + Win-Back

Day 7: amplification guide. Day 45: industry-branched repeat hook. Day 90: case study + SMS. Day 120+: Win-Back if no repeat order.

Developer Setup Requirements

Seven prerequisites before any flow goes live. Items marked DEV REQUIRED need active development work — others are configuration only.

01 **Klaviyo Account + Domain Auth**
Create Klaviyo account. Add SPF, DKIM, and DMARC records to BrandFeatured DNS. Required before any email can send. Allow 24–48hrs for DNS propagation.

02 **Subscriber Data Migration**
Export active subscribers, custom fields, segments, and suppression data (unsubscribes, bounces, spam complaints) from MailerLite. Import into Klaviyo with correct status flags to maintain compliance.

03 **ThriveCart → Klaviyo Integration**
Connect via ThriveCart's native Klaviyo integration (Settings → Integrations → Klaviyo). Passes: Placed Order, Ordered Product, Cancelled Order, Refunded Order. Do not connect Stripe directly — causes duplicate events.

04 **Klaviyo JS — Behavioral Tracking** DEV LIKELY NOT REQUIRED
ThriveCart's native integration does not pass behavioral events. Custom Klaviyo JS may be needed on brandfeatured.com for: Active on Site, Started Checkout, Viewed Item. DigitsUp will confirm within Week 1 whether custom implementation is needed or if ThriveCart can cover this differently.

05 **"Publishing Complete" Custom Event** DEV REQUIRED

When a campaign finishes publishing, send a custom event to Klaviyo to trigger the Post-Purchase flow at the

06 **Replace MailerLite Popup**

Disable existing MailerLite popup on brandfeatured.com. Replace with new 3-step Klaviyo popup. MailerLite embedded forms feeding pipeline lists (order forms etc.) stay as-is — do not remove.

07 **SMS Compliance (A2P 10DLC)**

Enable Klaviyo SMS, register sending number, add compliant opt-in language to popup Step 3. US sends require A2P 10DLC carrier registration — allow 1-2 weeks for approval before SMS flows can activate.

provided by DigitsUp within Week 1.

Full setup instructions, event specs, and integration notes

INVESTMENT

The build. Three ways to pay.

The scope is identical across all three options — popup rebuild, all 5 automation flows, full copywriting, segmentation logic, and SMS. The only variable is how the investment is structured.

LOWEST MONTHLY · LOWEST TOTAL

90-Day Build

$1,500/mo · billed monthly

$1,500/mo

$4,500 total · 3 payments

90	3×	$4.5k

BEST VALUE · MOST POPULAR

60-Day Build

$3,000/mo · billed monthly

$3,000/mo

$6,000 total · 2 payments

60	2×	$6k

FASTEST · SPEED PREMIUM

30-Day Build

One payment · everything live in 30 days

$7,500

paid upfront at kickoff

30	1×	$7.5k

- ✓ Full scope — all 5 flows + popup
- ✓ Checkout Abandon live in Week 1
- ✓ Flows delivered across 90 days
- ✓ Month-to-month billing
- ✓ Post-launch check-in at Day 90

- ✓ Full scope — all 5 flows + popup
- ✓ Checkout Abandon live in Week 1
- ✓ All flows live and tested by Day 60
- ✓ Faster recovery than 90-day
- ✓ Post-launch review at Day 60

- ✓ Full scope — all 5 flows + popup
- ✓ Checkout Abandon live in Week 1
- ✓ All flows live and tested by Day 30
- ✓ Maximum revenue recovery speed
- ✓ Post-launch check-in at Day 30

SUCCESS METRICS

What success looks like — and how we measure it.

We don't report on activity. Every metric below ties directly to revenue, conversion, or repeat purchase rate. Months 1–2 are baseline only — no benchmarks until the data exists to set them honestly.

TIER 1

Flow Performance

Measured per flow, reported monthly. These are the leading indicators — they tell us what's working before revenue confirms it.

METRIC	FLOW	WHAT IT MEASURES	MONTH 3 TARGET	MONTH 6 TARGET
Checkout Recovery Rate	Checkout Abandon	% of abandoned checkouts that convert via flow	3–5%	5–8%

Welcome Conversion Rate	Welcome Series	% of new subscribers who purchase within 10 days	2–4%	4–7%
Browse Recovery Rate	Site Abandonment	% of site abandoners who convert within 48hrs	1–3%	3–5%
Win-Back Conversion Rate	Win-Back	% of Day 120+ lapsed buyers who repurchase	Baseline only	4–8%
Click-to-Purchase Rate	All Flows	% of email clicks that result in a completed order	8–12%	12–18%

TIER 2

Revenue Attribution

The numbers that tie directly to pipeline. Reported monthly with Klaviyo attribution window set to 5-day click, 1-day open.

METRIC	HOW IT'S TRACKED	WHAT IT MEANS	MONTH 3 TARGET	MONTH 6 TARGET
Klaviyo Attributed Revenue	Klaviyo dashboard	Total revenue with a Klaviyo touchpoint in the window	Baseline set	15–25% of total rev
Revenue Per Recipient	Per flow, per send	Avg. revenue generated per contact in each flow	Baseline set	Month-on-month growth
Repeat Purchase Rate	Klaviyo + ThriveCart	% of first-time buyers who place a second order	Baseline only	10–15%
Avg. Days to Repurchase	Klaviyo profiles	Time between 1st and 2nd order — are we compressing the cycle?	Baseline only	Trending down vs. baseline

TIER 3

List & Retention Health

The long-game indicators. These compound over time — a healthy list in Month 6 is the foundation for everything in Year 2.

Net List Growth Rate	Klaviyo profiles	New subscribers minus unsubscribes — is the list growing?	Positive	>5% monthly growth
Unsubscribe Rate	Per flow + per send	Healthy signal that messaging is relevant. Flag if >0.5%	<0.3%	<0.2%
Flow Revenue Share	Klaviyo vs. campaigns	% of Klaviyo revenue coming from flows vs. one-off campaigns	>40% flows	>55% flows
SMS Opt-in Rate	Klaviyo popup Step 3	% of email subscribers who also opt into SMS	15–25%	25–35%

Reporting Cadence

MONTHLY

Full metrics report across all three tiers. Klaviyo attributed revenue, flow performance, list health. Delivered as a shared doc with commentary — not a data dump.

MONTH 3

First benchmark review. We set formal targets based on actual baseline data from Months 1–2. Any underperforming flows get a copy or logic audit.

MONTH 6

Full performance review against benchmarks. Optimization recommendations, flow refresh where needed, and a roadmap for the next phase of the program.

DELIVERY

What gets built and when.

Checkout Abandonment is always Week 1. Welcome + Popup comes second so industry segmentation is live before post-purchase flows launch.

$4,500 total · 3 payments

WEEK 1
Checkout Abandonment
Audit + architecture. Live by end of week.

WEEKS 2–4
Welcome + Popup
3-step popup built. Industry segmentation live. Welcome sequence active.

WEEKS 5–7
Win-Back
Industry FOMO branching built and live.

WEEKS 8–10
Site Abandonment
Browse + pricing page triggers live.

WEEKS 11–13
Post-Purchase · Full QA
Industry-branched post-purchase live. Full QA.

DAY 90
Performance check-in. Handoff docs delivered.

$6,000 total · 2 payments

WEEK 1
Checkout Abandonment
Audit + architecture. Live by end of week.

WEEKS 2–3
Welcome + Popup
Popup + segmentation live. Welcome sequence active by Week 3.

WEEKS 4–5
Win-Back + Site Abandon
Both flows live with industry branching.

WEEKS 6–8
Post-Purchase · Full QA
Industry-branched post-purchase live. Full QA.

DAY 60
Performance review. All flows active.

Everything live in one month

WEEK 1
Checkout Abandonment
Audit + architecture. Live by Day 5.

WEEK 2
Welcome + Popup
Popup built. Segmentation live. Welcome active.

WEEK 3
Win-Back + Site Abandon
Both flows live with industry branching.

WEEK 4
Post-Purchase · Full QA
All 5 flows active. Full QA complete.

DAY 30
Handoff + check-in. Everything running independently.

NEXT STEPS

Ready to build the *retention engine?*

Pick the timeline that fits where BrandFeatured is right now. The flows are the foundation — everything else gets layered on after.
